

Environmental Product Declaration

In accordance with ISO 14025:2006 and EN 15804:2012+A2:2019/AC:2021 for:

Loose Fill Cellulose Insulation

from

Ekovilla

Programme:	The International EPD® System, www.environdec.com
Programme operator:	EPD International AB
EPD registration number:	S-P-08311
Publication date:	2023-07-04
Valid until:	2028-07-04

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at www.environdec.com

Accountabilities for PCR, LCA and independent, third-party verification

Product Category Rules (PCR)

CEN standard EN 15804 serves as the Core Product Category Rules (PCR)

Product Category Rules (PCR): *Construction products, PCR 2019:14, version 1.2.5 ; Thermal insulation products (EN 16783:2017), C-PCR-005 (TO PCR 2019:14), version 2019-12-20 ; Thermal insulation products — Environmental Product declarations (EPD) — Product Category Rules (PCR) complementary to EN 15804 for factory made and in-situ formed products, prEN 16783:2022*

Life Cycle Assessment (LCA)

LCA accountability: Dr. *Carolina Szablewski, WeLOOP*

Third-party verification

Independent third-party verification of the declaration and data, according to ISO 14025:2006, via:

EPD verification by individual verifier

Third-party verifier: Andrew Norton, Renuables

Approved by: The International EPD® System

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

Company information

Owner of the EPD: Ekovilla Oy

Address: Katajajarjuntie 10, 45720 Kuusankoski

Contact:

info@ekovilla.com

Description of the organisation: Ekovilla Oy (Ltd) is a Finnish company with 40 years of experience and knowledge in forward-thinking thermal insulation. Ekovilla have always been the pacemakers in Finnish thermal insulation and have been considered the strongest brand by consumers for many years. Ekovilla are known to be a trust-worthy partner, a pioneer to innovate and a producer of low carbon insulation. Ekovilla was established in 1979 and has today around 140 employees. The company's core idea is "To provide thermal insulation made of quality recycled paper, which enables a natural and healthy way of living for a house, and can be both readily- and self-installed."

Name and location of production site(s):

Ekovilla Oy, Kuusankoski, Katajajarjuntie 10, 45720 KUUSANKOSKI;

Product information

Product name: Loose Fill Cellulose Insulation (LFCI)

Product identification: Ekovilla, Ekovilla IA, Ekovilla Puru, Isonem, Isolet, Nviro GreenWoolloose fill cellulose thermal insulation

Product description: Cellulose insulation products are made from recycled newspaper with additives. This insulation material is used for thermal insulation of buildings. This EPD reports cellulose insulation as loose fill. The LFCI can be used in attics, floors, pitched cavities, vertical cavities, sprayed wall applications. The considered service life time is 50 years. Product characteristics are given in the table below.

Name	Value	Unit
Declared unit	1	kg
Lowest density	26	kg/m ³
Average density	35	kg/m ³
Highest density	65	kg/m ³
Thermal conductivity	0.038	W/(m.K)
The duration/life span of the product:	50	Years

UN CPC code: 5465

Geographical scope: This EPD project report is elaborated for LFCI, produced in the Ekovilla plants in Finland, and sold to the European market.

LCA information

Functional unit / declared unit: Thermal insulation of 1 m³ with LFCI, with a lambda value of 0,038 W/mK, with a design life span of 50 years, for different applications.

Application	Density	Reference flow
Attic (open blow)	26-36 kg/m ³	1.178 kg LFCI
Floor (horizontal cavities)	45 kg/m ³	1.710 kg LFCI
Pitched cavities	45 kg/m ³	1.710 kg LFCI
Vertical cavities	55 kg/m ³	2.090 kg LFCI
Sprayed wall	35-40 kg/m ³	1.425 kg LFCI

Depending on the application, and its required density, the reference flow (quantity of product to fulfil the functional unit) is different and declared in the previous table. In this manner, the results presented in this report for a declared unit of 1 kg. Depending on the application, a conversion factor may be used.

Reference service life: 50 years

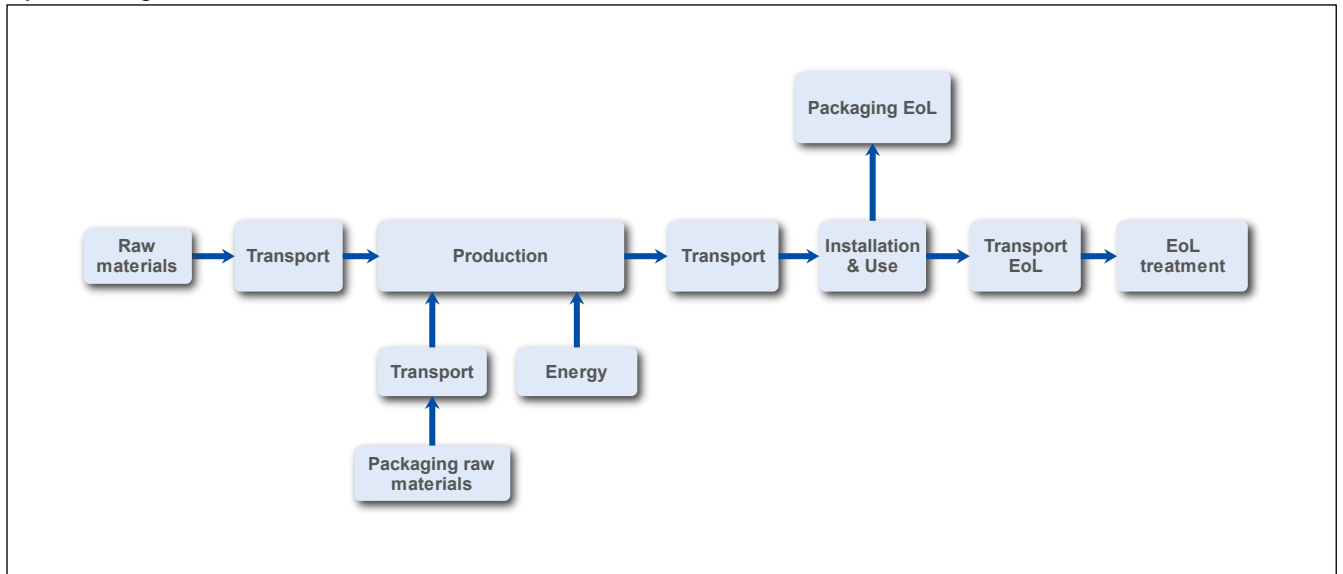

Time representativeness: 2021

Database(s) and LCA software used: Ecoinvent 3.8

Description of system boundaries: Cradle to grave

Cellulose thermal insulation is composed by sorted paper, newspaper and cardboard, with additives. Raw materials transport is considered, mainly truck transport. The raw materials are added in the manufacturing stage, electricity and fuel consumption are considered. The product is packed and distributed to the final client, distribution transportation is volume based. Installation is considered for loose fill cellulose insulation, as blowing the product. The product has 50 years lifespan, and it is assumed 100% recycled at its end of life.

System diagram:

More information: Electricity consumed by Ekovilla is 100% wind sourced.

Product stage (A1-3)

The product stage covers all raw materials, raw materials transport and the manufacturing process in the production of LFCI.

Sorted paper used as raw materials is a waste, and no environmental impacts have been associated with its production.

After manufacturing, LFCI is packed in plastic packaging.

The carbon content of LFCI raw materials has been taken into account in the calculation. This assessment is based on 44,4% of carbon content in the cellulose. Raw materials transport is mass-based and done by truck 16-32 metric ton.

Construction stage (A4-5)

The packed product is transported to the construction site. Insulation materials are light, then the transport is volume-based.

LFCI is installed by blower on site. Packaging waste is generated and its treatment is considered in the installation process.

Use stage (B1-7)

According to the manufacturer, it can be assumed that during 50 years of use in normal conditions, the product will not require any maintenance or repairs.

End-of-life stage (C1-4) and impacts and benefits beyond the system boundaries.

LFCI is removed with a machine at its end-of-life stage. The product is then 100% recycled into LFCI.

Ekovilla is conducting a study to consider recycling into biochar, however this scenario is not considered in this EPD.
